

TRACKING & MONITORING OF MOBILE DEVICES

GLOBE: LOCATION VISUALIZATION

Intellego XT's Globe is a sophisticated geofencing, tracking, and alerting application that allows Law Enforcement or Government Agencies to locate persons of interest (POIs) and monitor their movements. It answers the "Who" (subscriber identifiers), "Where" (latitude/longitude), and "When" (event timestamps) for location intelligence or contact tracing investigations.

With Globe, security operators can monitor a POI or group of POIs in real time using a device's MSISDN, IMSI, or IMEI. Globe also alerts analysts when key conditions are met – such as when a POI crosses a geofence or is in close proximity with another POI or location.

Additionally, Globe has a full-featured Graphical User Interface (GUI) and enables information to be organized by case or project. Access is managed permissions based on specified security classifications.

SS8 Intellego^{XT}
Globe

Globe provides fast and precise location data, resulting in
more accurate visualization of a suspect's movements.

A COMPLETE SOLUTION FOR LIVE TRACKING AND REPLAY OF HISTORIC ACTIVITY

Globe provides live tracking capabilities and historical location data, such as phone call and message events, from mobile networks. The interface is fast, easy to use, and compatible with a wide variety of web-based and self-hosted digital maps, offering both street-level mapping and satellite imagery. Visual trails highlight the location, trajectory, and velocity of POIs on a map. Satellite imagery can be stored on local servers for enhanced speed and reliability, and web-based imagery can be used where available.

SCALABLE ANALYSIS

Intellego XT's Globe effortlessly scales from single to multiple POIs and can provision up to 200 million subscribers. Analysts can import a list of POIs to track, as-well-as attach notes to cases, POIs, and locations. Cases are efficiently managed using a logical folder hierarchy. When combined with probes or network logs, Globe can perform passive data collection on all devices in, entering, or leaving a defined area. This flexibility makes it a powerful tool for real-time location data that helps Law Enforcement and Government Agencies detect and prosecute illegal activities.

PROVEN DEPLOYMENT

Globe has been implemented in all network generations, from 2G to 5G, in countries around the world. It can be deployed as either a standalone location client providing connectivity to third party systems or in conjunction with LocationWise, SS8's industry-leading Location-Based Services solution. Globe is cloud-ready or can be deployed on-premises, providing a convenient means to obtain, visualize, and present location data to monitoring officers.

WHY CHOOSE SS8 NETWORKS?

- A. It is our mission to provide the most advanced Lawful Intelligence solutions today, to assure a safer tomorrow.
- B. Our solutions are designed to exceed our customers' needs and help them successfully navigate the changing world of location data.
- C. We expedite investigative results by combining and analyzing multiple data sources simultaneously, providing new levels of visibility.
- D. We are trusted by the world's leading Law Enforcement Agencies (LEAs) and CSPs because our powerful compliant solutions deliver results.

KEY FEATURES

- Locate and track a person of interest on any network
- Replay historical movements through time
- Define geofences for zone entry or exit alerts
- Enable proximity alerts as targets group or move away from each other
- Tag Points of Interest and associate them with cases
- Define security mobile numbers that are authorized to locate targets via SMS
- Assign analysts to cases with permission levels to restrict or permit access to targets
- Mapping options that incorporate different map layers digital imagery

Learn how we can help you make lawful and location intelligence simple, efficient, complaint, and scalable.
