

# Bring All Your Investigative Data Together

Bring communications, digital evidence, and third-party data into one investigative workspace so teams can find connections faster and move cases forward with confidence while reducing time spent searching multiple systems and manually piecing together fragmented evidence.

## AI-Assisted Platform for Investigations

### Move Cases Forward with AI

- Search and analyze large volumes of voice, images and video
- Find people across images and video
- Automatically identify vehicles, weapons, and other key evidence
- Surface connections across communications, location, and digital evidence
- Generate reports faster

## Flexible, Secure Deployment—Your Way

### You Maintain Full Control of Your Data

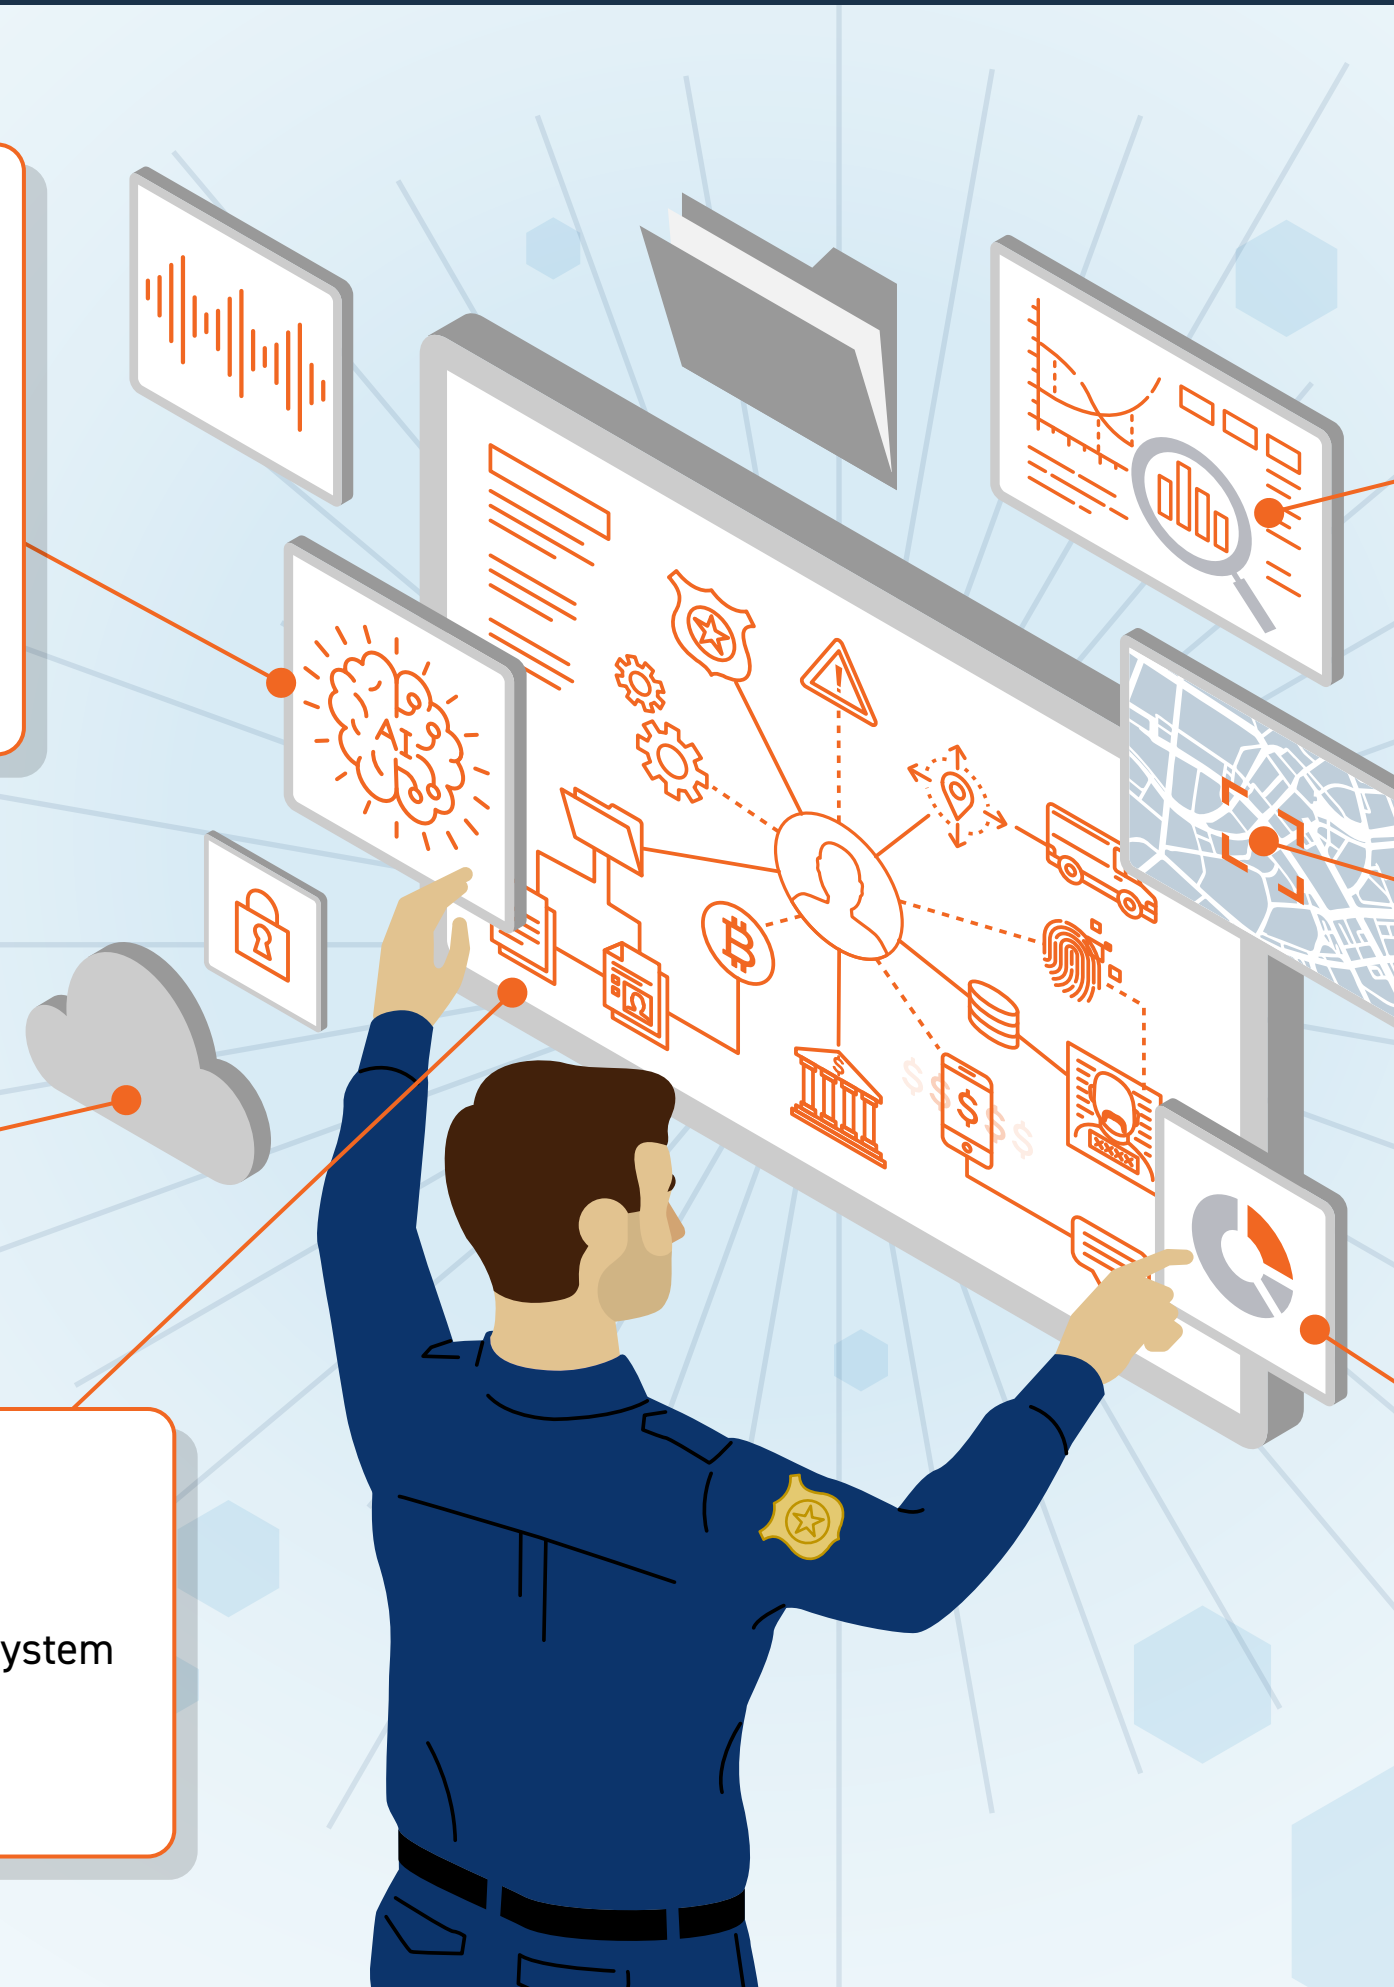

- Deploy in the cloud, on-premises, or in secure air-gapped environments
- Scale across teams and agencies
- Strong access controls and two-factor authentication

## Seamless Data Integration

### Work Easily Across Multiple Systems

- Bring communications, location, OSINT, and third-party data into one system
- Find leads hidden across multiple data sources
- Automatically connect related records without manual data wrangling

## Find Answers Faster

### Easy Search and Discovery

- Simplify triage of information and data – in one place
- Get results in seconds, not hours
- Quickly drill into the details behind every result

## Integrated Activity Tracking

### Connect Subjects of Interest, Devices, and Events

- See relationships between people, phones, and accounts
- View movements and locations on a map
- Understand what happened and when

## Best of Breed Data Visualization

### See What Matters Most

- Easy-to-read dashboards
- Quickly spot patterns and networks
- Spend less time clicking and more time investigating
